Purpose

This paper describes HSCIC Official Statistics publications planned for November 2013, media coverage for press released Official Statistics publications and web activity for publications released in August 2013.

Background to HSCIC Official Statistics

- As of April 2013, the HSCIC is responsible for the publication of more than 100 series of Official Statistics. Of these, 39 series are designated as National Statistics, meaning that the UK Statistics Authority (UKSA) recognises them as being compliant with the Code of Practice of Official Statistics.
- Most series of Official Statistics are published annually, or more frequently, and it is generally the case that each edition is broadly similar in content. It has been noted below where a publication is not an edition of a regularly repeating series or where there are substantial changes to the content of repeating series of statistics.
- Few series of Official Statistics can be expected to remain static over time, as we seek to publish outputs which meet the changing needs of our users, continually to improve their quality and utility, and as we respond to changes in the administrative and management data sources from which many of our Official Statistics are derived.
- The HSCIC is required to notify the National Statistician of any plans to cease publication of any Official Statistics we produce or of our intention to make any substantial changes in their scope which “could potentially impact adversely on the quality, comparability or coverage of the statistics”
- “Experimental statistics” are new Official Statistics that are under-going evaluation. A key part of the “Experimental statistics” label is user engagement in the evaluation of those statistics. The HSCIC invites readers to comment on these publications, which will help inform the next reports.
- Official Statistics which are designated as National Statistics are annotated with ‘[NS]’

Web Analytics for Statistical Publications – August 2013

Purpose:

The following table shows the publications for August. The statistics measure the number of unique page views and document downloads for the two week period following the launch of each publication on the HSCIC's website.

Unique page views – the number of unique views of the publication page during the two-week period after its release. Note that one user could generate more than one unique visit.

Document views (# of docs) – is the number of times documents within the publication have been opened (either for viewing or download). Note that one unique visit could create more than one document view/download. The number in parentheses is the number of documents included in the publication.

Entrances direct to documents – is the number of visits that bypassed the publications page and went directly to a document. This could be done via a Google search or if the document has been linked to from a referring website.
